

Digital Connection vs. Mental Well-being

Presenter: Li Wei / Year 2 Sociology / Global Studies 201

The Ubiquitous Landscape

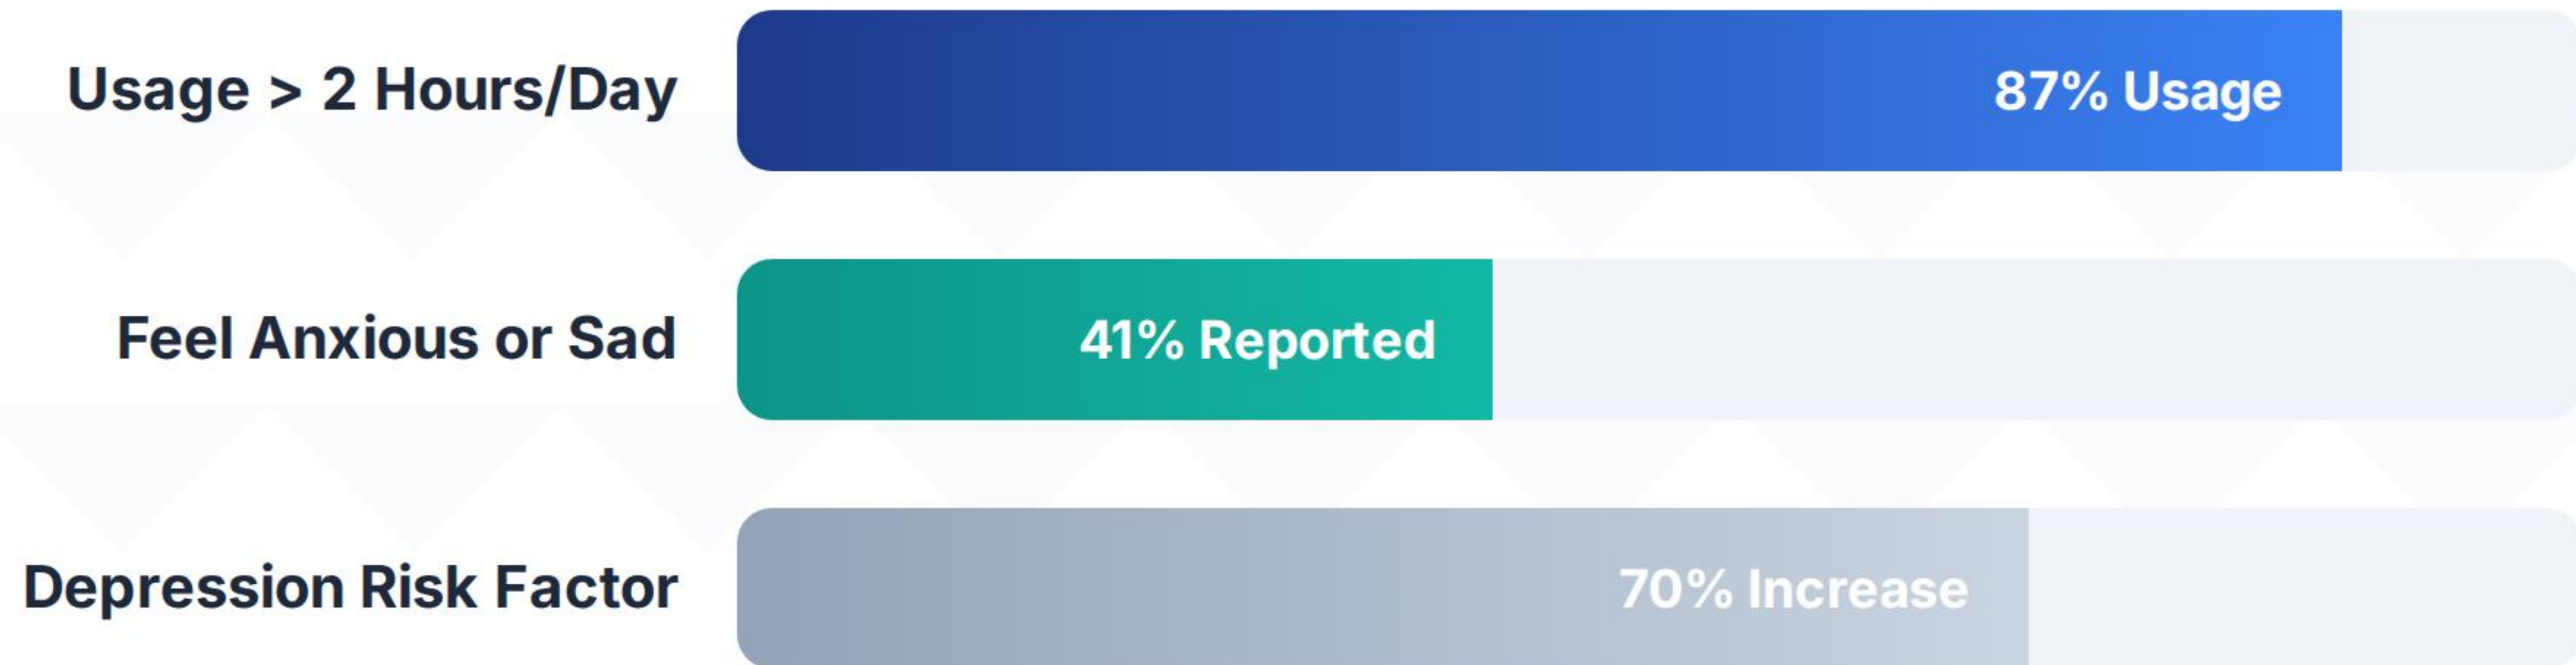

Gen Z are recognized as **Digital Natives**, experiencing life through an online lens.

Data indicates that 95% of students utilize YouTube daily, while 70% engage with Instagram and Snapchat.

The constant connectivity phenomenon is a fundamental reality that is essentially *indispensable* in the modern era.

Usage and Anxiety Statistics

Source: Mental Health Statistics Report 2025

Psychological Manifestations

FOMO Effect

The fear of missing out creates significant stress and anxiety regarding social inclusion.

Comparison

Constant utilization of curated feeds leads to a negative self-image and low self-esteem issues.

Cyberbullying

Nearly 87% of teens have experienced some form of online harassment or negative interactions.

Strategic Mitigation Efforts

Digital Detox: Implementing time limits is a crucial strategy for emotional balance.

Awareness: Education regarding platform algorithms is essentially significant.

Platform Responsibility: Companies should prioritize user well-being as a primary imperative.
