

Ethical Implications of AI in Higher Education

Presenter: Li Wei (Year 3, International Student) | Digital Sociology 301

UNIVERSITY OF HONG KONG

Contextual Landscape of AI

Modern lecture halls are undergoing a **paradigm shift** driven by Large Language Models (LLMs).

The integration phenomenon is now ubiquitous, with academic environments rapidly adapting to AI-assisted methodologies.

Utilizing AI tools has transitioned from an experimental novelty to a *standardized scholarship practice* for global information acquisition.

Escalating Student Adoption Rates

Core Ethical Dilemmas

Academic Integrity

The erosion of original authorship through over-reliance on generative outputs and undisclosed usage.

Algorithmic Bias

LLM training datasets frequently perpetuate societal inequalities and lack diverse cultural representation.

Cognitive Decline

The risk of deteriorating critical reasoning skills due to the delegation of complex tasks to machines.

Synthesis & Strategic Outlook

- ✔ **Transparency Frameworks:** Establishing foundational disclosure policies for all academic stakeholders.
- ↻ **Assessment Redesign:** Shifting focus toward oral defense and real-time critical reasoning evaluations.
- 🏰 **Preparedness Gap:** Bridging the critical divide between rapid student adoption and lagging faculty training.
